12. ☐ Note the attached Information Disclosure Statement(s).13. ☐ Other:	(PTO/SB/08) Paper No(s)		

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that "accessing" is a useful, concrete, and tangible result. In response to this argument, Examiner states that "accessing" doesn't meet the requirements of 35 USC 101, as accessing doesn't result in storage or output of the result of a method or instructions, so there is no clear tangible result.

Applicant argues that Lawder et al. in view of Pruett et al. does not teach the flip or rotation transformations of the independent claim. In response to this argument, Examiner notes that Pruett et al. does teach a flip, followed by a rotation. A Y-Flip results in reversing the positions of the bits, thus it teaches "inverting bits of the first bitblock". Inverting is defined by "The American Heritage College Dictionary", 4th edition, as "to turn inside out or upside down" and "to reverse the position, order, or condition of". In this case, the bits in the bitblock change position as a flip around an axis. As noted in the Final Rejection of 19 December 2006, "in the case of the examples in Figure 3.2, with a 2x2 grid, a transpose is a rotation". In addition to this, the claimed language provides the limitation "said rotation transformation interchanging bits of said first bitblock". It is clear in Figure 3.2 that the transposition interchanges bits of a bitblock.
